harnastaeudev@gmail.com

Software Developer with experience in building and testing full-stack, backend, and API-driven applications using Java, JavaScript/TypeScript, SQL, React, Node.js, and REST APIs. Seneca Polytechnic Computer Programming & Analysis graduate with a three-year Ontario College Advanced Diploma and a strong foundation in object-oriented programming, data structures and algorithms, databases, software design, cloud computing, testing, CI/CD, and AI-assisted development.

EXPERIENCE

Moneris, Contract Software Developer

OCTOBER 2024 - APRIL 2026

- Built and tested API-driven application features across backend services, frontend integrations, and Microsoft SQL Server workflows, supporting implementation, verification, deployment, and production readiness.
- Developed automated API and integration tests using Jest, Supertest, and Postman to validate request/response contracts, authentication flows, validation rules, error handling, and database-backed behaviour.
- Reduced average defect triage time by 75% by integrating AI-assisted repository review, automated failure summarization, and structured root-cause analysis into QA and development workflows.
- Investigated production defects across application, API, and database layers by reproducing failures, tracing root causes, validating corrective changes, and supporting release verification.
- Designed reusable test cases, test data, assertions, and regression workflows for REST APIs and SQL-backed features, improving consistency across development and release cycles.
- Participated in code reviews, CI/CD validation, technical documentation, and release-quality workflows with a focus on correctness, maintainability, edge cases, and production reliability.

SmartSolutionsSupply, Technical Support & Web Operations

AUGUST 2019 - MARCH 2021

- Supported and maintained a headless WordPress CMS integrated with a React frontend, hosting environment, and connected content/data workflows.
- Investigated production issues across frontend, CMS, hosting, and integration layers by reproducing failures, isolating root causes, applying fixes, and validating resolutions.
- Performed functional, integration, regression, and deployment validation while documenting defects, troubleshooting procedures, release checks, and operational outcomes.

EDUCATION

Seneca Polytechnic, Ontario College Advanced Diploma - Computer Programming & Analysis

Completed AUGUST 2026 | President's Honour List, Winter 2026

- Three-year software development program covering Java, C/C++, C#, JavaScript/TypeScript, object-oriented programming, data structures & algorithms, REST APIs, databases, software analysis and design, testing, cloud computing, project management, AI for programmers, UI/UX, and full project implementation.
- Completed applied individual and team projects involving requirements analysis, system design, implementation, testing, documentation, Agile project delivery, and technical presentation.

TECHNICAL SKILLS

Programming Languages
Java, C#, C, C++, JavaScript, TypeScript, SQL, Python

Backend & APIs
Node.js, Express, .NET / ASP.NET Core, REST APIs, HTTP/JSON, Postman, client-server architecture

Frontend
React, Next.js, React Native, Expo, HTML5, CSS3

Databases
Microsoft SQL Server, Oracle, PostgreSQL, MySQL, MongoDB, Supabase

Testing & Quality
Jest, Supertest, JUnit 5, Mockito, REST Assured, API testing, integration testing, regression testing, debugging, root-cause analysis

Software Engineering
OOP, data structures & algorithms, software analysis & design, design patterns, Git/GitHub, Agile/Scrum, code review

Cloud & DevOps
Docker, Linux, CI/CD, Google Cloud Platform (GCP), cloud-computing fundamentals, AWS fundamentals

AI-Assisted Development
Claude Code, OpenAI Codex, MCP, agent workflows, prompt engineering, LLM application patterns, tool/function calling, AI-assisted debugging and code review

SELECTED PROJECTS

VeriGoods: Full-Stack Product Platform
TypeScript, React Native, Expo, Supabase, PostgreSQL, Edge Functions.
Built a cross-platform product lookup and evaluation application supporting authentication, user profiles, barcode/product search, history, favorites, and recommendation workflows.

Java Backend Test Automation Framework
Java, Spring Boot, JUnit 5, Mockito, REST Assured, Maven, Docker
Built a reusable backend/API automation framework covering unit, integration, regression, authentication, validation, error-handling, and negative-path testing.
